Subject: Watch PC

Barb,

I talked to Charles, about the issue Kim raised during the teleconference - missed cigs in "activated" smoking interval. He promised to come up with a proposal, for the future programs. For time being, he proposed to enter all forgotten cigs in the following smoking interval and let subject communicate this "entries" to MDS personnel while downloading data. Let`s discuss this at our CO meeting and than communicate it to MDS.

Charles also mentioned presentation to PM USA proposed by you on final WatchPC program. Since he thought of mid November for this visit, I strongly advice to include the "real" data from our study in this presentation. I think it would be nice to see "the real word situation data" than only some imaginary data. Let`s also discuss this ASAP, so I can communicate it further.

Thanks Maria
